SUMMARY

I have completed my Bachelor of Technology (B.Tech) degree in Computer Science & Engineering (AI & ML) with a CGPA of 8.3. Software Developer with internship experience building and integrating **RESTful APIs**, **JWT authentication** and MERN-stack web applications, with strong skills in **JavaScript**, **React.js**, **SQL**, **Git/GitHub**, **Postman** and Data Structures & Algorithms. Solved 200+ DSA problems on LeetCode. Seeking a Software Developer role to build reliable backend and full-stack products.

EDUCATION

- Bachelor of Technology (B.Tech) in Computer Science & Engineering (AI & ML) — **KCC Institute of Technology and Management**, Greater Noida | 2022 – 2026 | CGPA: 8.3
- Higher Secondary (Class 12, UP Board) | 2020 – 2021 | 80%
- Secondary (Class 10, UP Board) | 2018 – 2019 | 75%

WORK EXPERIENCE

Software Development Engineer Intern | PriyaQubit Private Limited | *May 2025 – Dec 2025*

- Designed and integrated **RESTful APIs** with Node.js and Express.js for frontend-backend communication and data processing.
- Developed and tested **15+ RESTful API endpoints** using Express.js and Postman.
- Implemented **JWT-based authentication and authorization**, ensuring secure user access and session management.
- Developed **full-stack web applications** using the **MERN Stack**, implementing complete frontend-to-backend functionality.
- Built responsive user interfaces with **React.js** and **Tailwind CSS**, improving usability and cross-device compatibility.

PROJECTS

AI Component Generator — AI-Powered UI Builder [GitHub]
React.js, Tailwind CSS, REST API Integration

- **Overview:** A smart web app that turns a simple sentence, like "a pricing card with a button", into clean, ready-to-use React and Tailwind CSS code. No manual coding needed.
- **Why it matters:** Developers and beginners spend hours rebuilding the same UI pieces. This tool brings that down to seconds while keeping the design responsive and consistent.
- **What I built:** Designed the complete prompt-to-component workflow by integrating an **AI API** (**API integration**), and presented the results in a clean, easy-to-use responsive interface.
- **Standout feature:** Added an **Explanation Mode** that explains the generated code in simple terms, so the tool works as a learning aid for beginners as well as a productivity tool for developers.
- **How it works:** The user types a sentence, the app sends it to an **AI API**, the AI understands it, and the app shows ready-to-use React and Tailwind CSS code.
- **Who it helps:** Students, beginners and developers who want to build UI screens faster.

Food Ordering App — Fast Single Page Application [GitHub]
React.js, Redux Toolkit, Tailwind CSS, Immer

- **Overview:** A modern food ordering web app where users explore a large menu, find dishes instantly with search and filters, build a cart and check out, all without page reloads.
- **Why it matters:** Delivers a smooth, app-like ordering experience even with **100+ menu items**, on both mobile and desktop.
- **What I built: Real-time search and filtering** plus complete **cart management** (add, remove and update items) with efficient filtering logic for fast UI rendering.
- **Clean architecture:** Centralized state across 10+ components using **Redux Toolkit**, removing prop drilling and making the code easier to maintain; used **Immer** for safe, bug-free state updates.
- **Reliable checkout:** Implemented **protected routing** so invalid or unauthorized checkouts are blocked.
- **How it works:** The user opens the app, searches for a dish, adds it to the cart, changes the quantity, and checks out.
- **Technologies:** React.js for the screens, Redux Toolkit for cart data, Tailwind CSS for design, and Immer for safe updates.

TECHNICAL SKILLS

Backend: Node.js, Express.js, FastAPI, RESTful APIs, API Integration, Authentication & Authorization (JWT)
Languages: Python, JavaScript (ES6+), C++, SQL
Databases: SQL, MongoDB, DBMS
Frontend: HTML5, CSS3, React.js, Redux Toolkit, Tailwind CSS, Responsive Web Design
Tools & Platforms: Git, GitHub, Postman, VS Code
Core Concepts: Data Structures & Algorithms, OOPs, Operating Systems, Computer Networks

ACHIEVEMENTS

- Solved **200+ Data Structures & Algorithms problems** on LeetCode.
- Strong understanding of Arrays, Strings, Searching, Sorting, and Linked Lists.
